Overview

Padded jackets and parkas are both popular choices for cold weather, but they differ in construction and features. Padded jackets, often called puffer jackets, are typically filled with synthetic or down insulation and known for their lightweight and packable nature. Parkas, on the other hand, are generally heavier, longer, and offer more comprehensive protection against harsh weather, often including features like hoods and multiple pockets.

Advantages of Padded Jackets

Water Resistance. Unlike down, synthetic insulation retains its insulating properties when wet.

Quick Drying Time. Padded jackets dry significantly faster than down jackets.

Hypoallergenic.

More Affordable.

Lower Warmth-to-Weight Ratio.

Less Compressible.

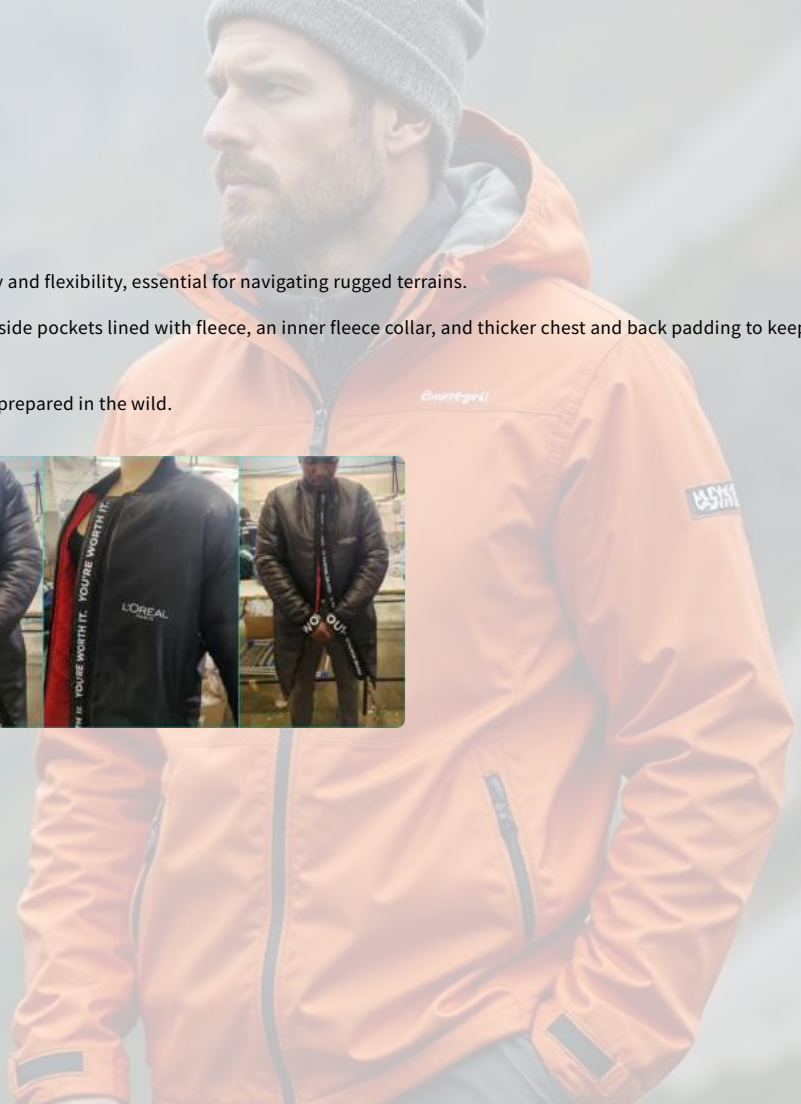

Reduced Breathability.

Outdoor Features

Constructed for the outdoors, this jacket combines Thorn Tough Fabric to provide unbeatable durability and flexibility, essential for navigating rugged terrains.

These jackets are ideal for hunters and outdoor enthusiasts. Designed with comfort in mind, it features side pockets lined with fleece, an inner fleece collar, and thicker chest and back padding to keep you warm during chilly days or nights.

Perfect for farming, hiking, and outdoor adventures, this jacket is your go-to gear for staying warm and prepared in the wild.

Branding Opportunities

Various designs with various colour combinations custom made to suit corporate identity.
